

bt-WebFilter

The most advanced Web content filtering software available.
Seriously.

How Serious Are You About Your Internet Security?

Every day new Web-based threats add to our already demanding business environments.

“ *The greatest threat today is from the Internet. Malicious code writers have become increasingly devious in their ability to access company networks, and wreak havoc within.* ”

—Tom Ridge,
Homeland Security

Protecting any organization that relies on Internet access to conduct business has become more difficult, because along with those increasing threats, comes an increasing number of choices in security software. Your choice is no longer important to your or-

ganizations' protection—it is critical.

All Web filtering software blocks pornography, gambling and other inappropriate content—but not all block malicious code, spyware and pop-ups. **BursteK's bt-WebFilter** allows you to set and enforce policies with respect to threats like bandwidth-intensive streaming media, malicious mobile code, Phishing sites and adware—all serious threats to your organization's productivity, resources and security. These threats require a serious commitment to security in order to protect your enterprise, and a serious solution: **bt-WebFilter**.

As the only Internet filtering application designed exclusively for Windows 2000 and above, BursteK's **bt-WebFilter** enables IT administrators to think differently about enterprise Internet content filtering. For the first time, you can protect your company from the latest Internet threats and positively impact the core area you're concerned with:

- **Employee Productivity**
- **Network Security**
- **Legal Liability**
- **Network Resources**

Because **bt-WebFilter** was designed specifically for **Microsoft servers**, you avoid all the headaches associated with cross-platform integration. The application is designed to be setup once. All the processes are automatic, utilizing true **Active Directory, Replication of settings** across multiple servers, **Remote Management**, and **Auto-update**. With fast, easy implementation and true “maintenance-free” operation, it's no wonder **bt-WebFilter** is the ISA Server.org Editors' Pick!

Did You Know ?

- Over 90% of internet connected computers are infected with spyware.
- Phishing attacks increased by over 1200% in 2004.
- Over 50% of the files accessed through Warez and other P2P sites contain some sort of malicious code.
- 67% of non-IT employees admitted to downloading from the network at work.

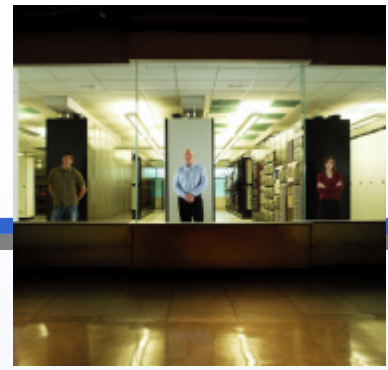

Is Your Organization Experiencing...

- Network slowdowns from spyware or illegal P2P file-sharing?
- Federal investigation from illegal file sharing such as movies or music?
- Legal liabilities from pornography or other offensive material, downloaded by employees?
- Spam bombardment from employee engaged adware?
- Employees “hijacking” the company network resources for personal use?
- Company information appearing on non-company Web sites?

Assess and Address Your Internet Security Issues:

- Block destructive banner/pop-up ads.
- Eliminate the legal risks from illegal file sharing and downloading.
- Virtually eliminate the risk of mobile malicious code attacks, including virus, Trojan horses, and worms.
- Block spyware transmissions to host sites, preventing sensitive data outflow.
- Eliminate the legal risks from employee exposure to inappropriate content.
- Protect your most valuable resource...your employees.

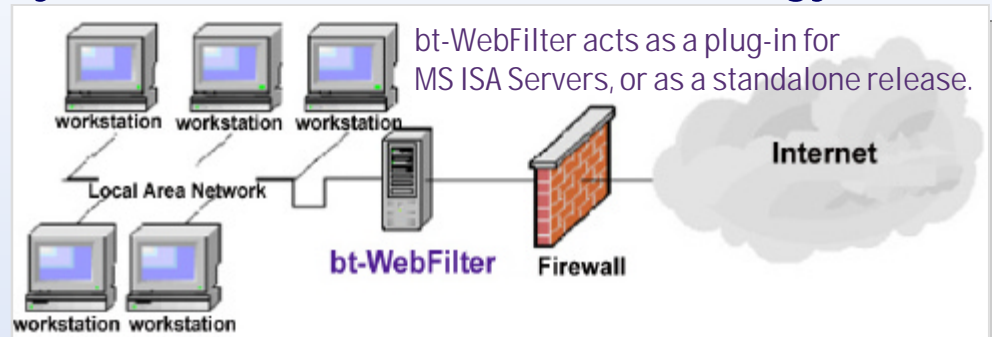

bt-WebFilter

The most advanced Web content filtering software available.
Seriously.

Designed Exclusively for Microsoft Server Technology ...

As the only Internet filtering application designed exclusively and specifically for Microsoft server technology, **bt-WebFilter** offers **robust functionality** with an **intuitive installation and interface**. Utilizing **Active Directory**, the application architecture integrates completely with the Windows network, avoiding the glitches inherent in applications not designed for a specific environment and eliminating massive settings updates each time a user is added or changed. This total and seamless integration allows for **complete process automation**.

A Serious URL Control List...

At the core of **bt-WebFilter** technology is the **URL Control List**. This is an accurate and extremely comprehensive database of literally **millions of unique Internet domains** that are predefined into 50+ categories. Our proprietary technology scours the internet for new and changed content, classifying Web sites into different categories based on pre-defined protocols. Ultimately the accuracy of classification comes from our team of expert Control List Technicians. Since content on the Web is designed for human viewing, it takes a dedicated team of professionals to apply that "human logic" to the analysis and final classification of Web content.

bt-WebFilter is part of an award winning suite of security applications from Burstek. These feature-rich applications are designed to work together or as standalone security.

- **Quick installation** means the application requires minimal time to setup and is ready for deployment immediately.
- **Easy administration** utilizing MMC, the application is designed to "set and forget," freeing IT staff for more mission critical functions.
- **Remote management** allows administrators to manage the software from globally remote workstations.
- **Active Directory** integration minimizes setup time and automatically updates settings as users are added, leave the company or even switch departments, part of the "set and forget" function.
- **Replication** is a powerful feature for larger installations that have multiple servers. With multiple proxies, you can keep all servers in sync with filtering policies, Active Directory changes, and URL Category List updates.
- **Real-Time monitoring** means IT can react immediately to security threats, preventing breaches or downtime.
- **Flexible management** policies allow administrators to customize Web access and content by user, categories, department, or business unit.
- **Quota management** allows administrators flexibility in granting access for non-work Internet usage by user, group, time, bandwidth, category, etc., with two levels of quota strictness & outcomes for exceeded thresholds.

System Requirements:

bt-WebFilter for MS ISA server requires a Windows 2000 or 2003 server

bt-WebFilter Standalone can be installed on a Windows 2000 or 2003 machine
